

ASSIGNMENT

Name:CH.HARSHINI

Hall ticket number:2303a51185

Batch-03

Date:-19-01-2025

1. Implementing CRUD Operations

You implement Create, Read, Update, and Delete operations by calling specific methods on your Sequelize model objects within your controller logic.

- **Create:** Use the `.create()` method to insert a new row into the database.
- **Read:** Use `.findAll()` to retrieve all records or `.findByPk(id)` to find a specific entry by its primary key.
- **Update:** Use the `.update()` method, which requires a `where` clause to specify which record to modify.
- **Delete:** Use the `.destroy()` method with a `where` clause to remove records from the database.

2. Data Validation and Constraints

Sequelize handles data integrity at both the application level and the database level:

- **Model Validation:** These are defined in the model schema (e.g., `isEmail: true, len: [2, 20]`) and are checked before the query is sent to the database.
- **Constraints:** These are database-level rules such as `allowNull: false, unique: true`, or foreign key restrictions that prevent invalid data from being stored.

3. Defining Relationships

Relationships are defined in your model configuration files to link different tables together.

- **One-to-Many:** For a platform where one course has many enrollments, you use `Course.hasMany(Enrollment)` and `Enrollment.belongsTo(Course)`.
- **Many-to-Many:** If a student can join many courses and a course has many students, you use `User.belongsToMany(Course, { through: 'Enrollments' })`.

4. Role of Sequelize Methods

These built-in methods act as an abstraction layer, translating JavaScript code into SQL queries:

Method	Role	SQL Equivalent
<code>create</code>	Inserts a new record.	<code>INSERT INTO</code>

Method	Role	SQL Equivalent
<code>findAll</code>	Retrieves all records.	<code>SELECT *</code>
<code>findById</code>	Retrieves one record by ID.	<code>SELECT ... WHERE id = x</code>
<code>update</code>	Modifies existing records.	<code>UPDATE ... SET</code>
<code>destroy</code>	Removes records.	<code>DELETE FROM</code>

5. Handling Database Errors Gracefully

To prevent your server from crashing during database issues, you should use a structured error-handling approach:

- **Async/Await:** Use `try/catch` blocks or an `asyncHandler` middleware (as seen in your `app.js`) to catch rejected promises.
- **Middleware:** Pass errors to a global `errorHandler` (like the one imported in your `app.js`) to send a clean JSON response back to the client.
- **Specific Errors:** Check for specific Sequelize error types, such as `SequelizeValidationError` or `SequelizeUniqueConstraintError`, to provide helpful feedback to the user.

  },
  "devDependencies": {
    "nodemon": "^3.1.11"
  }
}
  
```

```
C:\Users\91939\OneDrive\Desktop\Fullstack2026>npm init express
Need to install the following packages:
create-express@1.0.4
Ok to proceed? (y) y

npm warn deprecated source-map-url@0.4.1: See https://github.com/lydell/source-map-url#deprecated
npm warn deprecated urix@0.1.0: Please see https://github.com/lydell/urix#deprecated
npm warn deprecated resolve-url@0.2.1: https://github.com/lydell/resolve-url#deprecated
npm warn deprecated source-map-resolve@0.5.3: See https://github.com/lydell/source-map-resolve#deprecated
npm warn deprecated inflight@1.0.6: This module is not supported, and leaks memory. Do not use it. Check out lru-cache if you want a good and tested way to coalesce async requests by a key value, which is much more comprehensive and powerful.
npm warn deprecated formidable@1.2.6: Please upgrade to latest, formidable@v2 or formidable@v3! Check these notes: https://bit.ly/2ZEqIau
npm warn deprecated babel-preset-es2015@6.24.1: 🎉 Thanks for using Babel: we recommend using babel-preset-env now: please read https://babeljs.io/env to update!
npm warn deprecated glob@7.2.3: Glob versions prior to v9 are no longer supported
npm warn deprecated superagent@2.3.0: Please upgrade to superagent v10.2.2+, see release notes at https://github.com/forwardemail/superagent/releases/tag/v10.2.2 - maintenance is supported by Forward Email @ https://forwardemail.net
npm warn deprecated core-js@2.6.12: core-js@<3.23.3 is no longer maintained and not recommended for usage due to the number of issues. Because of the V8 engine whims, feature detection in old core-js versions could cause a slowdown up to 100x even if nothing is polyfilled. Some versions have web compatibility issues. Please, upgrade your dependencies to the actual version of core-js.

>>   "email": "john@gmail.com"
>> }
```

The image shows two instances of Microsoft Visual Studio Code running on a Windows desktop. Both instances have their title bars and panes visible.

Top Window (Left):

- Terminal:** Displays PowerShell history with commands like `Set-ExecutionPolicy RemoteSigned -Scope CurrentUser` and `npm init -y`.
- Code Editor:** Shows a `package.json` file for a project named "20260119". The file includes fields for name, version, description, main, scripts, keywords, author, license, type, dependencies, devDependencies, and nodeVersion.
- Bottom Bar:** Shows system icons for battery, signal, and date/time (19-01-2026).

Bottom Window (Right):

- Terminal:** Displays the same PowerShell history as the top window.
- Code Editor:** Shows a `package-lock.json` file for the same project, listing detailed dependency information for various packages like `anymatch`, `balanced-match`, and `binary-extensions`.
- Bottom Bar:** Shows system icons for battery, signal, and date/time (19-01-2026).

The screenshot shows the Visual Studio Code interface with a dark theme. The Explorer sidebar on the left lists files: .node_modules, .env, .se, package-lock.json, and package.json. The package.json file is selected and its content is displayed in the main editor area:

```
1 {  
2   "name": "20260119",  
3   "version": "1.0.0",  
4   "description": "",  
5   "main": "index.js",  
6   "scripts": {  
7     "test": "echo \\\"Error: no test specified\\\" & exit 1"  
8   },  
9   "keywords": [],  
10  "author": "",  
11  "license": "ISC",  
12  "type": "commonjs",  
13  "dependencies": {  
14    "express": "^5.2.1",  
15    "react": "^19.2.3"  
16  },  
17  "devDependencies": {  
18    "nodemon": "^3.1.11"  
19  }  
20}  
21
```

The bottom right corner features an AI integration panel titled "Ask about your code".

The screenshot shows the Visual Studio Code interface with a dark theme. The Explorer sidebar on the left lists files: Welcome, Untitled-3, package.json, .env, package-lock.json, package.json, and Untitled-1. The terminal tab is active, displaying the following command history:

- PS D:\FULLSTACK 2026\20260119> Set-ExecutionPolicy RemoteSigned -Scope CurrentUser
- PS D:\FULLSTACK 2026\20260119> npm init -y

Output from the terminal shows the creation of package.json:

```
Wrote to D:\FULLSTACK 2026\20260119\package.json:  
{  
  "name": "20260119",  
  "version": "1.0.0",  
  "description": "",  
  "main": "index.js",  
  "scripts": {  
    "test": "echo \\\"Error: no test specified\\\" & exit 1"  
  },  
  "keywords": [],  
  "author": "",  
  "license": "ISC",  
  "type": "commonjs",  
  "dependencies": {  
    "express": "^5.2.1",  
    "react": "^19.2.3"  
  },  
  "devDependencies": {  
    "nodemon": "^3.1.11"  
  }  
}
```

The bottom right corner features an AI integration panel titled "Ask about your code".

The screenshot displays two instances of the Visual Studio Code (VS Code) interface side-by-side, both showing the same project structure and files.

Top Window (Left):

- File Explorer:** Shows a folder named "20260119" containing "node_modules", ".env", ".se", "package-lock.json", and "package.json".
- Editor:** Two tabs are open:
 - package-lock.json:** Displays a large JSON object representing the dependency tree. It includes fields like "name", "version", "description", "main", "scripts", "keywords", "author", "license", and "type". It also lists numerous dependencies with their specific versions and integrity checksums.
 - package.json:** Displays a smaller JSON object with basic metadata.
- Bottom Status Bar:** Shows "Trending videos" and "Avengers: Doom...".

Bottom Window (Right):

- File Explorer:** Shows a folder named "20260119" containing "node_modules", ".env", ".se", "package-lock.json", and "package.json".
- Editor:** Two tabs are open:
 - package.json:** Displays a smaller JSON object with basic metadata.
 - package-lock.json:** Displays a large JSON object representing the dependency tree.
- Bottom Status Bar:** Shows "package.json" and "Ask about your code" (with AI instructions).

The screenshot shows the Visual Studio Code interface with a dark theme. In the Explorer sidebar, there is a folder named '20260119' containing files like '.env', '.se', 'package-lock.json', and 'package.json'. The 'package.json' file is selected and shown in the main editor area. The code content is as follows:

```
1  {
2    "name": "20260119",
3    "version": "1.0.0",
4    "description": "",
5    "main": "index.js",
6    "Debug": {
7      "scripts": {
8        "test": "echo \\\"Error: no test specified\\\" & exit 1"
9      },
10     "keywords": [],
11     "author": "",
12     "license": "ISC",
13     "type": "commonjs",
14     "dependencies": {
15       "express": "^5.2.1",
16       "react": "^19.2.3"
17     },
18     "devDependencies": {
19       "nodemon": "^3.1.11"
20     }
21 }
```

A floating window titled 'Ask about your code' is overlaid on the editor. It contains the text 'Explore and understand your code' and 'Ask' and 'Auto' dropdown menus. The status bar at the bottom right of the floating window shows 'package.json'.
